This guideline has been revised to delete information on the Price Anderson Amendments Act, which has been moved to Policy and Guideline 2.9 Quality Significant Procurement

Definitions

Contractor-Directed Work - Work under a contract for which the Contractor is accountable for the outcome of the work performed and routinely provides work direction to the Contractor's work force.

ES&H related item means any material, or a combination of materials, which could be classified as hazardous or potentially hazardous, or equipment whose failure or improper operation could jeopardize the health and/or safety of individuals, could have a detrimental impact on the environment, or could cause damage to SNL facilities.

ES&H related services means any activity, performed by Contractors on site, on SNL controlled premises, which could adversely affect the health and/or safety of any individual, could have a detrimental impact on the environment, or could cause damage to SNL facilities.

Hazardous means any material or activity that poses unreasonable risk to the health and safety of the environment or the Contractor.

OSHA means Occupational Safety and Health Act of 1970, Public Law 91-596.

Primary Hazard Screening (PHS) is an assessment of the hazards associated with an organization's work environment.

Programmatic Risk Classification (PRC) is a classification methodology in which each SNL organization assesses the hazards and risks associated with their programs or projects. PRCs are designated 1 through 5, with 1 demanding the highest rigor and 5 demanding the lowest rigor. See the Management Integration and Implementation Manual for further information.

Sandia-Directed Work - Work under a contract for which SNL retains accountability for the outcome of the work performed and routinely provides direction to the Contractor's work force.

Sandia-Controlled Premises - Sandia-Controlled Premises (space) - real property (land, buildings or portions thereof) in which the United States Department of Energy has a legal interest by means of ownership, lease, administrative withdrawal, or permit **and** which the Department has designated for use by Sandia National Laboratories. It does **not** include sites where SNL performs work but DOE has no legal interest (e.g., courtesy office provided to a visiting Sandian on the premises of a technology transfer partner).

ES&H Requirements - 2.8.G.1

SNL considers the protection of human life and health as well as the environment as its top priority. Contractors performing work under an SNL contract must comply with all ES&H requirements as specified in SC 703-REQ and if necessary, SC 705-KET of the contract. The SCR must reference this clause in the SOW when training courses are required. All required courses shall be provided to the SCR by the Requester. The type of work to be performed may either be Sandia-directed work or Contractor-directed work, but in all cases, the Contractor is responsible for assuring that all Contractor personnel have the required training as required by the contract.

Section II Ts&Cs incorporates into orders/contracts the clause entitled "Safety, Health, Environment, Government or Government-furnished property and Fire Protection." It outlines the Contractor's responsibilities when the SOW calls for work/product of a hazardous nature.

In addition to the Section II clause, the SCR shall incorporate into Section I clause(s) requiring ES&H training if applicable.

ES&H Clauses - 2.8.G.2

Standard Clause	Document	Use When
703-REQ	solicitation and order/contract	Contractor will perform work at Sandia or a government site, have access to Sandia Computers or where contractor employees will hold or will need to hold either an “L” or a “Q” security clearance.
705-KET	solicitation and order/contract	Contractor’s personnel and any subcontractors are required to receive any training as specified by the SOW and incorporated in this clause but is not covered in SC 703-REQ

Material Safety Data Sheets - 2.8.G.3

Material Safety Data Sheets (MSDS) should accompany all hazardous products. If it should be forwarded to the SCR, the SCR shall forward any MSDS received to Industrial Hygiene/Systems and Processes and on construction contracts Health and Protection at SNL/CA.

Applicable Clauses - 2.8.G.5

SC 703-REQ - Required Contractor General Awareness Education and Training

SC 705-KET - Specialized Contractor Education and Training Requirements
